# KEWAUNEE

Setting the standard for quality laboratory furniture, fume hoods, and project performance since 1906.

Every Kewaunee project begins with a partnership. Whether you're an architect or a lab manager, we offer a team of professionals who will help you create the laboratory environment that best meets your needs.

You'll work with experienced sales representatives who form a nationwide network of consultants. They are backed by over 500 trained and experienced employees dedicated to the principles of innovative design, superior quality and continuing service.

At Kewaunee, our employees recognize that our job is not complete until our customer is satisfied. Our project management concept includes the integration of manufacturing requirements, design/engineering and a construction schedule to assure on-time delivery and completion of laboratory installations that will provide excellent function and longevity.

When customers require a fast-paced project schedule, our Instalab 45 program offers a wide range of product options with 45 day shipment.

To further enhance our services, Kewaunee has implemented a formal program to utilize the principles of team problem solving. Employee "Pride in Kewaunee" teams have been formed to

identify and implement improvements in manufacturing methods, procurement, communications and technology. Their goal is to ensure that our customers receive the best quality, features and value for their laboratory furniture requirements.

## History

In 1906, a handful of investors with a vision hired 18 workers and formed what is today the Kewaunee Scientific Corporation. Their goal was ambitious: build a superior line of laboratory furniture and accessories.

Until the early 1900's, America relied on Europe, and particularly Germany, for the bulk of its laboratory equipment. But after World War I the American scientific industry began to gain ground. At Kewaunee, we grew rapidly. We expanded our

market with an elaborate dealer organization. By the end of the 1920's, we were building both steel and wood laboratory furniture and accessories.

During World War II, we were a government contractor for the Air Corps, and an important supplier for the Manhattan Project.

After the war, America experienced a technological explosion resulting in increased demand for scientific laboratory equipment. Kewaunee responded by building its present facilities in Statesville, North Carolina and its staff of experienced people.

A lot has changed in 100 years but not the original goal: to build a superior line of laboratory furniture, the best that can be built.

## Experience

Many years of experience have qualified Kewaunee as a leader in the design and manufacture of laboratory furniture. We serve clients from many disciplines in industry, research centers, schools and universities, government agencies, hospitals and clinics.

From original designs and layouts through complete installations, Kewaunee has the experience to make your laboratory the best that it can be.

## Facilities

Statesville, North Carolina is the home of Kewaunee's primary manufacturing facility and corporate offices. Located in the nation's wood furniture manufacturing area, the plant was conceived and built as a state-of-the-art facility for the production of wood laboratory furniture.

Through expansion and consolidation, steel laboratory furniture manufacturing, fume hood production and work top fabrication have been added. Continued updating and investment in sophisticated tooling and automated equipment, plus latest technology finishing systems, make this facility one of the largest, most modern operations in the world dedicated exclusively to laboratory furniture and equipment.

# Wood Laboratory Furniture

Signature Series Wood Laboratory Furniture is one of Kewaunee's new generation product lines designed specifically to meet today's quality/value laboratory standards.

Highest standards of wood casework construction, plus multiple choices of premium wood species and beautiful acid-resistant finishes, make the Signature Series furniture the choice of laboratory equipment specifiers and users world-wide.

## Typical Applications

The Signature Series furniture is extremely flexible in style and function. The wide selection of unit sizes, types and finishes meets the demanding criteria of users representing many disciplines in industry, research centers, schools and universities, government facilities, hospitals and clinics.

## Product Detail

The following sections will detail complete information on the Signature Series wood furniture line. Included are construction features, unit sizes and types, options and accessories, ordering codes and much more.
